No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                     50

```
The invention relates to a transposon nucleic acid comprising a genetically engineered translation stop signal in the three reading frames at least partly within a transposon end sequence recognized by a transposase. The transposase. The proposition deletion derivatives of polypeptide coding nucleic acids. The method involves performing a transposition reaction in the presence of a target nucleic acid containing a polypeptide coding nucleic acid and in the presence of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New transposon nucleic acid comprising a genetically engineered translation stop signal within a transposon end sequence recognized by transposase useful for producing deletion derivatives of polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                            Transposon; genetic engineering; transposase; Cat-Mu; ds

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        genetically engineered translation stop signal in the three reading frames at least partly within a transposon end sequence recognized by a framsposane. The transposon is useful for producing deletion derivatives of polypeptide coding nucleic acids. The method involves performing a transposition reaction in the presence of a target nucleic acid and containing a polypeptide coding nucleic acid and in the presence of a transposon containing a genetically engineered translation stop signal sequence in three reading frames at least partly within a transposon end acquence recognized by a transposase; and recovering a target nucleic acid having the transposon incorporated in the protein coding nucleic acid. The present sequence represents a Cat-Mu transposon modified end
    transposon containing a genetically engineered translation stop signal sequence in three reading frames at least partly within a transposon end sequence recognized by a transposase; and recovering a target mucleic acid having the transposon incorporated in the protein coding nucleic acid. The present sequence represents a Cat-Mu transposon modified end fragment without 5' overhang
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              oŧ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New transposon nucleic acid comprising a genetically engineered translation stop signal within a transposon end sequence recognized by transposase useful for producing deletion derivatives of polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1. .4

                                                                              genetically engineered translation stop signal in the three reading genetically engineered translation stop signal in the three reading frames at least partly within a transposon end sequence recognized by a transposase. The transposon is useful for producing deletion derivatives of polypeptide coding nucleic acids. The method involves performing a transposition reaction in the presence of a target nucleic acid containing a polypeptide coding nucleic acid and in the presence of a transposon containing a genetically engineered translation stop signal sequence in three reading frames at least partly within a transposon end sequence recognized by a transposase; and recovering a target nucleic acid having the transposon incorporated in the protein coding nucleic acid. The present sequence represents a modified Cat-Mu(Stop)-transposon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a transposon nucleic acid comprising a genetically engineered translation stop signal in the three reading frames at least partly within a transposon end sequence recognized by a transposase. The transposance is useful for producing deletion derivatives of polypeptide coding nucleic acids. The method involves performing a transposoition reaction in the presence of a target nucleic acid containing a polypeptide coding nucleic acid and in the presence of a transposon containing a genetically engineered translation stop sighal sequence in three reading frames at least partly within a transposon end sequence in comparation special acid having the transposon incorporated in the protein coding nucleic acid having the transposon incorporated in the protein coding nucleic acid. The present sequence represents a modified Cat-Mu(Stop)-transposon
                                                                                                                                                                                                                                                                                                                                                                                                                           New transposon nucleic acid comprising a genetically engineered translation stop signal within a transposon end sequence recognized by a transposase useful for producing deletion derivatives of polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gapă
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          detection; transposition detection; pathogen typing; ning; mutation detection; Mu end DNA; MM1141.

An interaction transfer of a merunou of userecting a mismatch in a test double stranded nucleic acid transperies detecting transposition of the Mu-end nucleic acid into the target, where transposition at the predominant site indicates the presence of mismatch at about that site. The methods are useful for typing a pathogenic microorganism strain, for screening an embryo for the presence of interest, detecting the presence of known mutation in a gene of interest, and diagnosing the presence of a previously unidentified mutation in promoting mutation. The kit is useful for detecting the presence of a tumourpromoting mutation. The kit is useful for detecting the presence of a number of a mutation or polymorphism of interest in a nucleic acid molecule. The oligonucleotide MM1141.
Detecting a mismatch in a test double stranded nucleic acid target, useful for typing a pathogenic microorganism strain, comprises detecting transposition of the Mu-end nucleic acid into the target.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                The invention relates to a method of detecting a mismatch in a test
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Insertional mutation; synaptic complex; transposon; screening; ds.

                                                                                                                  mutation at a random or quasi-random position in cellular nucleic acid in a target cell comprising introducing into the target cell a synaptic complex. The method is particularly useful for efficiently inserting a transposable polynucleotide at random or quasi-random locations in the chromosomal or extra-chromosomal nucleic acid of a target cell. The method may also be used for screening the genome of cells that comprise an insertional mutation that induces a phenotypic or genotypic change relative to the cells that are not subject to insertional mutagenesis. The present sequence is the presut transposon end of Bacteriophage Mu non-transferred strand, used in the exemplification of the invention. (Updated on 11-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1. .4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a transposon nucleic acid comprising a genetically engineered translation stop signal in the three reading frames at least partly within a transposon end sequence recognized by a transposase. The transposon is useful for producing deletion derivatives of polypeptide coding nucleic acids. The method involves performing a transposition reaction in the presence of a target nucleic acid containing a polypeptide coding nucleic acid and in the presence of a transposon containing a genetically engineered translation stop signal sequence in three reading frames at least partly within a transposon end sequence recognized by a transposase; and recovering a target nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New transposon nucleic acid comprising a genetically engineered translation stop signal within a transposon end sequence recognized by a transposase useful for producing deletion derivatives of polypeptide.

The methods are useful for typing a pathogenic microorganism strain, for screening an embryo for the presence of mismatchinterst, detecting the presence of known mutation in a gene of interest, and diagnosing the presence or absence of a tumburpromoting mutation. The kit is useful for detecting the presence of mutation in a gene of interest in a nucleic acid molecule. The present sequence represents the Mu end DNA fragment construction
acid having the transposon incorporated in the protein coding nucleic acid. The present sequence represents a \operatorname{Cat-Mu} transposon containing wild
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Detecting a mismatch in a test double stranded nucleic acid target, useful for typing a pathogenic microorganism strain, comprises detecting transposition of the Mu-end nucleic acid into the target.

The invention relates to a Mu-like transposable element (I) used for generating functional fusion proteins after insertion into a target DNA. The Mu-like element comprises: (a) a left transposable element attachment attachments DNA sequence encoding for a protein domain located between attachment and attR; (c) after insertion of the transposable element into a target DNA sequence, a fusion mRNA sequence is transcribed originating either from the target DNA on either side of the transposable element or from inside the transposable element and conditioning through the attachment site sequences and into the protein coding region, resulting in a single fusion open reading frame (ORF). The constructs are useful in the development of a protein domain library, in the construction of multicunctional enzymes and in the accelerated evolution of new enzymatic activities. The sequences AAZSB880-ZSB884 represent deletion mini-Mu elements of the invention (encoded ORF - AAXSS901-YSS906)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Generating fusion proteins using transposable elements, useful for development of a protein domain library and in the construction of multifunctional enzymes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a Mu-like transposable element (I) used for generating functional fusion proteins after insertion into a target DNA. The Mu-like element comprises: (a) a left transposable element attachment atteantment attachment atterantment attachment attent and a right transposable element attachment attachment attex and a right transposable element attachment of an exceptions DNA sequence encoding for a protein domain located between attiments; (c) after insertion of the transposable element into a target DNA sequence, a fusion mRNA sequence is transcribed originating either from the target DNA on either side of the transposable element or from inside the transposable element and continuing through the attachment site sequences and into the protein coding region, resulting in a single fusion open reading frame (ORF). The constructs are useful in the development of a protein domain library, in the construction of multicactional enzymes and in the accelerated evolution of mew enzymatic activities. The sequences AAZ28884 represent deletion mini-Mu elements of the invention (encoded ORF - AAY55901-Y55906)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Generating fusion proteins using transposable elements, useful for development of a protein domain library and in the construction of multifunctional enzymes.

sequence comprising a transposon sequence and a DNA recombination sequence at two sites in the copy of the target DNA sequence, and inducing a recombination event between the recombination sequences to delete a portion of the copy of the target DNA sequence. The methods and compositions of the present invention are useful for preparing a target construct for use in a targeting vector for gene targeting or homologous recombination. They can also be used for precisely modifying plant and/or animal genome in a predetermined way. This sequence represents a primer used in an example of the invention
                                                                                                                                                                                                                                                                                                                                                                 Preparing a targeting construct using a transposon and DNA recombination sequence, useful in making a targeting vector capable of modifying plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to methods of preparing a targeting construct for use in a targeting vector capable of modifying a target DNA sequence, by obtaining a copy of the target DNA sequence in vitro, inserting a DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Transposon Mu; transposable element; fusion protein; attachment site; attL; attR; protein domain library; enzyme; accelerated evolution; 88.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gарв

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                    The invention relates to a Mu-like transposable element (I) used for generating functional fusion proteins after insertion into a target DNA. The Mu-like element comprises: (a) a left transposable element attachment site attl. and a right transposable element attachment site attl. where attR is no more than 62 nucleotides long; (b) a site for insertion of an exogenous DNA sequence encoding for a protein domain located between attl. and attR; (c) after insertion of the transposable element into a target. DNA sequence, a fusion mRNA sequence is transcribed originating either from the target DNA on either side of the transposable element or from inside the transposable element and continuing through the attachment site sequences and into the protein coding region, resulting in a single fusion open reading frame (ORF). The constructs are useful in the development of a protein domain library, in the construction of multicelunctional enzymes and in the accelerated evolution of new enzymatic activities. The sequences AAZ28884 represent deletion mini-Mu elements of the invention (encoded ORF - AAY55901-Y55906)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                           Generating fusion proteins using transposable elements, useful for development of a protein domain library and in the construction of multifunctional enzymes.

                                                                                                              The invention relates to methods of preparing a targeting construct for use in a targeting vector capable of modifying a target DNA sequence, by obtaining a copy of the target DNA sequence in vitro, inserting a DNA sequence comprising a transposon sequence and a DNA recombination sequence at two sites in the copy of the target DNA sequence, and inducing a recombination event between the recombination sequences to delete a portion of the copy of the target DNA sequence. The methods and compositions of the present invention are useful for preparing a target construct for use in a targeting vector for gene targeting or homologous recombination. They can also be used for precisely modifying plant and/or animal genome in a predetermined way. This sequence represents a primer used in an example of the invention
sequence, useful in making a targeting vector capable of modifying plant and/or animal genome in a predetermined way.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Preparing a targeting construct using a transposon and DNA recombination sequence, useful in making a targeting vector capable of modifying plant and/or animal genome in a predetermined way.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to methods of preparing a targeting construct for use in a targeting vector capable of modifying a target DNA sequence, by obtaining a copy of the target DNA sequence in vitro, inserting a DNA sequence comprising a transposon sequence and a DNA recombination sequence at two sites in the copy of the target DNA sequence, and inducing a recombination event between the recombination sequences to delete a portion of the copy of the target DNA sequence. The methods and compositions of the present invention are useful for preparing a target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Targeting construct, targeting vector; transposon; recombination; deletion; plant genome; animal genome; primer; PCR; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 83;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Fransposon-based targeting construct related primer Mul-1.

Xhoi; Morex (mla) plants were greenhouse grown in the R
Wise lab at lowa State University, Ames, IA; 7 day old
green seedlings were infected with isolate 5874 of
Blumeria graminis f. sp. hordei, and leaves were harvested
24, 48 and 72 hr post-inoculation and snap frozen
In the TJ Close lab at the University of California,
Riverside, total RNA was prepared from each sample pool,
equal quantities of all three RNA pools were combined,
poly(A) RNA was purified from the mixture, one primary
unamplified cDNA library was made, and 1 million pfu were
in vivo excised to give pBluescript SK(-) cDNA phagemids
(Chin). Phagemids were plated and picked at the Clemson
University Genomics Institute (CUGI) (Begum, Palmer,

Blumeria graminis f. sp. hordei, and leaves were harvested 24, 48 and 72 hr post-inoculation and snap frozen (Wise). In the TJ Close lab at the University of California, Riverside, total RNA was prepared from each sample pool, equal quantities of all three RNA pools were combined, poly(A) RNA was purified from the mixture, one primary unamplified cDNA library was made, and I million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids (Chin). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      EST 19-OCT-2001

// Alone infected with isolate State Library HVCDNA017 Morex (mla) plants were greenhouse grown in the R Wise lab at lowa State University, Ames, IA; 7 day old green seedlings were infected with isolate SST4 of Blumeria gramminis for sp. hordei, and leaves were harvested gramminis for sp. hordei, and leaves were harvested gramminis for sp. hordei, and leaves were harvested in the TJ close lab at the University of California, Riverside, total RNA was prepared from each sample pool, equal quantities of all three RNA pools were combined, poly(A) RNA was purified from the mixture, one primary unamplified cDNA library was made, and I million pfu were in vivo excised to give plauescript SK(-) cDNA plagemids (Chin). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing) Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ä

/lab hose=""Hordewn vulgare green seedling EST library //lone lib="Hordewn vulgare green seedling EST library HVCDNA0014 (Blumeria infected)"

// Inote="Weetor: pBluescript SK(-); Site_1: ECORI; Site_2: XhoI; Morex (mla) plants were greenhouse grown in the R Wise lab at lowa State University, Ames, IA; 7 day old green seedlings were infected with isolate 5874 of Blumeria grammins f. sp. hordei, and leaves were harvested 24, 48 and 72 hr post-incoulation and snap frozen (Wise). In the TJ Close lab at the University of California, Riverside, total RNA was prepared from each sample pool, equal quantities of all three RNA pools were combined, poly(A) RNA was purified from the mixture, one primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids (Chin). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Akthins and Wing). Plasmid DNA preparations, DNA sequence and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or above. For more details on library preparation and sequence analysis were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      HVSMEm0015C18f Hordeum vulgare green seedling EST 19-OCT-2001 HVCDNA0014 (Blumeria infected) Hordeum vulgare subsp. vulgare cDNA clone HVSMEm0015C18f, mRNA sequence.

//note="Vector: pBluescript SK(-); Site_1: ECORI; Site_2: Xho1; Morex (mla) plants were greenhouse grown in the R Wise lab at Iowa State University, Ames, IA; 7 day old green seedlings were infected with isolate 5874 of Blumeria grammins f. sp. hordei, and leaves were harvested 24, 48 and 72 hr post-inoculation and snap frozen (Wise). In the TV close lab at the University of California, Riverside, total RNA was prepared from each sample pool, equal quantities of all three RNA pools were combined, poly(A) RNA was purified from the mixture, one primary unamplified cDNA library was made, and 1 million pfu were in vivo excised to give pBluescript SK(-) cDNA phagemids (Chin). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer, Frisch, Arkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simonns, Oates, Rambo, Main). The sequence has been triammed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or
Hordeum vulgare subsp. vulgare
Spermatophyta, Magnoliophyta; Liliopsida; Poales; Poaceae;
Pooideae; Triticaee; Hordeum.

//note=Weetcor: pBluescript SK(-); Site 1: ECORI; Site 2: XhoI; Morex (mla) plants were greenhouse grown in the R Wise lab at lowa State University, Ames, Is, 7 day old green seedlings were infected with isolate 5874 of Blumeria graminis f. sp. hordei, and leaves were harvested 24, 48 and 72 hr post-inoculation and snap frozen (Wise). In the TV Close lab at the University of California, Riverside, total RNA was prepared from each sample pool, equal quantities of all three RNA pools were combined, poly(A) RNA was purified from the mixture, one primary unamplified cDNA library was made, and million pffu were in vivo excised to give pBluescript SK(-) cDNA phagemids (Chin). Phagemids were plated and picked at the Clemson University Genomics Institute (CUGI) (Begum, Palmer; Frisch, Akkins and Wing). Plasmid DNA preparations, DNA sequencing and sequence analysis were performed at CUGI (Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main). The sequence has been trimmed to remove vector sequence and contains a minimum of 100 bases of phred value 20 or seminore analysis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           'product="anchored
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       97. .438
